## Special Material

ACOVIC® provides 3 special materials protection. And an option of 20 different styles and more than 100 colors and patterns suitable in a variety of professional and budget range use.

### INNOMAX

New Innovation of Lead Free to combine super Lightweight , High performance for radiation protection and comfort from bi-layer technic, to be your best choice of protection. *It is the world's lightest lead Free material.*

### INNOLIGHT

### INNOLIGHT

Excellent performance in light weight and radiation protection exceed your imagination. Material composed lead free and hi density Nano chemical technology, encapsulate in a special material.

### CLASSIC

### CLASSIC

It's a Classic lead material but high performance in radiation protection, with advance bi layer technology and endcapsulate in a vinyl resin and plasticized matrix , helps in lowering its weight and also maximize performance.

## Acovic® Cover

In our continual effort towards the development of better fabric for our Radiation Protection Apparel, the Radiology division of Trivitron Healthcare section, developed a highly advance fabric material through our in house Research & Development. Introducing “Acovic Fabric” Fabric which is Ergonomic Design And Fashionable Acovic Fabric includes a range of fabrics that are infused with Trizar Technology.

## Innovation Technology

# Trizar®

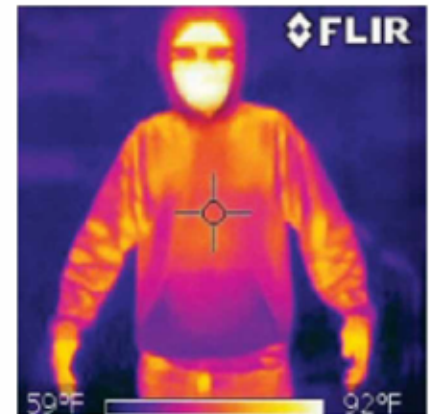

Trizar® fabrics contain **Emisshield®**

**Emisshield®** materials were originally used by NASA to improve the performance of the ceramic tiles on space ships. **Emisshield®** materials are patented (2020) and designed to save energy while increasing efficiency in nearly all heat driven applications.

### EMISHEILD SPECS

- Increases Warmth
- Better Dry Times
- Optimize Temperature
- Increases MVTR and breathability of waterproof laminates
- Staple fiber and print are anti microbial reducing odor

Radiation is a form of heat transfer through which infrared rays transfer heat from one object to another without physical contact. The human body’s primary method for discharging heat is radiation. The skin is constantly radiating heat in all directions towards the objects adjacent to it, such as clothing or the surrounding air. The body can also receive heat from objects around it through radiation. **Trizar®** printed fabrics have been measured to absorb between 4 to 18 degrees Fahrenheit of Infrared (IR) heat more than a control. The printed **Trizar®** fabrics also increase emissivity and have shown to retain their performance past 30 launderings. The materials are highly conductive and spread heat to eliminate cold spots as you can see
